

Fortnightly

- ⑥ Wash the ear mould in warm soapy water.
- ⑥ Rinse well.
- ⑥ Shake off any excess water.

- ⑥ Dry the ear mould gently with a clean towel.
- ⑥ Use your puffer to blow air through the ear mould tubes.

- ⑥ Leave overnight to dry thoroughly before reattaching to your hearing aid.

Monthly

- ⑥ Gently clean the battery compartment with a soft brush.

When required

- ⑥ Change the battery. Your hearing aid may beep to warn you that the battery is low.
- ⑥ Carry spare batteries with you when you go out.
- ⑥ Have your ears checked for wax by your Audiologist, Doctor or Ear Nurse Specialist. We suggest doing this every six months.

Caring for your Behind-the-Ear Hearing Aid

CARING FOR YOUR BEHIND-THE-EAR HEARING AID

To ensure your Behind-the-Ear hearing aid always performs at its best, follow these simple steps:

Every day

When the hearing aid is not in use:

- 1 Turn the hearing aid off.
- 2 Wipe the hearing aid with a soft dry cloth.

- 3 Remove the battery.

- 4 Place the hearing aid (with the battery compartment open) in your dehumidifier.
- 5 Screw the lid back on.

In the morning

Before putting the hearing aid in your ear:

- 1 Check the ear mould sound outlet for wax and clean with a wire loop cleaning tool.

- 2 Check for debris on the hearing aid casing, switches and microphone screen.
- 3 Gently remove any debris with a soft brush.

Weekly

Maintain your dehumidifier:

- 1 Remove the pillow from your dehumidifier.
- 2 Place the pillow in the microwave as shown.

- 3 Microwave the pillow for 30 seconds on HIGH.
- 4 Allow the pillow to cool; the crystals should be dark blue. If the crystals are still a pink or violet colour place the pillow in the microwave for a further 30 seconds.
- 5 Repeat as many times as necessary for the crystals to turn dark blue.
- 6 Make sure you allow the pillow to cool between each microwave session.
- 7 NEVER put hearing aids into the microwave.
